D. Amazon Aurora provides enhanced performance and durability for RDS database (DB) instances. They make it easy to elastically scale out beyond the capacity constraints of a single DB instance for read-heavy database workloads. You can create one or more replicas of a given source DB Instance and serve high-volume application read traffic from multiple copies of your data, thereby increasing aggregate read throughput. Read replicas can also be promoted when needed to become standalone DB instances. Read replicas are available in Amazon RDS for MySQL, MariaDB, PostgreSQL, Oracle, and SQL Server as well as Amazon Aurora. For the MySQL, MariaDB, PostgreSQL, Oracle, and SQL Server database engines, Amazon RDS creates a second DB instance using a snapshot of the source DB instance. It then uses the engines' native asynchronous replication to update the read replica whenever there is a change to the source DB instance. The read replica operates as a DB instance that allows only read-only connections; applications can connect to a read replica just as they would to any DB instance. Amazon RDS replicates all databases in the source DB instance. Amazon Aurora further extends the benefits of read replicas by employing an SSD-backed virtualized storage layer purpose-built for database workloads. Amazon Aurora replicas share the same underlying storage as the source instance, lowering costs and avoiding the need to copy data to the replica nodes. For more information about replication with Amazon Aurora, see the online documentation.

**Answer: B**

Explanation:

Explanation

Amazon RDS Read Replicas

Amazon RDS Read Replicas provide enhanced performance and durability for RDS database (DB) instances.

They make it easy to elastically scale out beyond the capacity constraints of a single DB instance for read-heavy database workloads. You can create one or more replicas of a given source DB Instance and serve high-volume application read traffic from multiple copies of your data, thereby increasing aggregate read throughput. Read replicas can also be promoted when needed to become standalone DB instances. Read replicas are available in Amazon RDS for MySQL, MariaDB, PostgreSQL, Oracle, and SQL Server as well as Amazon Aurora.

For the MySQL, MariaDB, PostgreSQL, Oracle, and SQL Server database engines, Amazon RDS creates a second DB instance using a snapshot of the source DB instance. It then uses the engines' native asynchronous replication to update the read replica whenever there is a change to the source DB instance. The read replica operates as a DB instance that allows only read-only connections; applications can connect to a read replica just as they would to any DB instance. Amazon RDS replicates all databases in the source DB instance.

Amazon Aurora further extends the benefits of read replicas by employing an SSD-backed virtualized storage layer purpose-built for database workloads. Amazon Aurora replicas share the same underlying storage as the source instance, lowering costs and avoiding the need to copy data to the replica nodes. For more information about replication with Amazon Aurora, see the online documentation.

**NEW QUESTION: 2**

HOTSPOT

You have a Lync Server 2013 infrastructure.

You plan to deploy Persistent Chat features to meet the following requirements:

Support up to 50,000 concurrent users.

Enable the Persistent Chat Server Compliance service.

Ensure that all of the features are automatically available if a single server fails.

You need to identify the minimum number of Front End Servers and Microsoft SQL Server Back End Servers that are required for the planned deployment.

How many servers should you identify? (To answer, select the

appropriate number of servers for each component in the answer area.)

Explanation:

**NEW QUESTION: 3**

Scenario: A company is planning to migrate its on-premise data center to a cloud environment. The company has a large amount of data and a complex application architecture. The company is considering several cloud providers and is looking for a provider that can offer a high level of availability and scalability. The company is also looking for a provider that can offer a high level of security and compliance. The company is also looking for a provider that can offer a high level of cost-effectiveness. The company is also looking for a provider that can offer a high level of flexibility and agility. The company is also looking for a provider that can offer a high level of reliability and uptime. The company is also looking for a provider that can offer a high level of performance and speed. The company is also looking for a provider that can offer a high level of support and service. The company is also looking for a provider that can offer a high level of innovation and leadership. The company is also looking for a provider that can offer a high level of partnership and collaboration. The company is also looking for a provider that can offer a high level of transparency and accountability. The company is also looking for a provider that can offer a high level of trust and confidence. The company is also looking for a provider that can offer a high level of satisfaction and loyalty. The company is also looking for a provider that can offer a high level of growth and expansion. The company is also looking for a provider that can offer a high level of success and achievement. The company is also looking for a provider that can offer a high level of excellence and quality. The company is also looking for a provider that can offer a high level of innovation and leadership. The company is also looking for a provider that can offer a high level of partnership and collaboration. The company is also looking for a provider that can offer a high level of transparency and accountability. The company is also looking for a provider that can offer a high level of trust and confidence. The company is also looking for a provider that can offer a high level of satisfaction and loyalty. The company is also looking for a provider that can offer a high level of growth and expansion. The company is also looking for a provider that can offer a high level of success and achievement. The company is also looking for a provider that can offer a high level of excellence and quality.

**A.** The company should choose a cloud provider that offers a high level of availability and scalability. The company should also choose a provider that offers a high level of security and compliance. The company should also choose a provider that offers a high level of cost-effectiveness. The company should also choose a provider that offers a high level of flexibility and agility. The company should also choose a provider that offers a high level of reliability and uptime. The company should also choose a provider that offers a high level of performance and speed. The company should also choose a provider that offers a high level of support and service. The company should also choose a provider that offers a high level of innovation and leadership. The company should also choose a provider that offers a high level of partnership and collaboration. The company should also choose a provider that offers a high level of transparency and accountability. The company should also choose a provider that offers a high level of trust and confidence. The company should also choose a provider that offers a high level of satisfaction and loyalty. The company should also choose a provider that offers a high level of growth and expansion. The company should also choose a provider that offers a high level of success and achievement. The company should also choose a provider that offers a high level of excellence and quality.

**B.** The company should choose a cloud provider that offers a high level of availability and scalability. The company should also choose a provider that offers a high level of security and compliance. The company should also choose a provider that offers a high level of cost-effectiveness. The company should also choose a provider that offers a high level of flexibility and agility. The company should also choose a provider that offers a high level of reliability and uptime. The company should also choose a provider that offers a high level of performance and speed. The company should also choose a provider that offers a high level of support and service. The company should also choose a provider that offers a high level of innovation and leadership. The company should also choose a provider that offers a high level of partnership and collaboration. The company should also choose a provider that offers a high level of transparency and accountability. The company should also choose a provider that offers a high level of trust and confidence. The company should also choose a provider that offers a high level of satisfaction and loyalty. The company should also choose a provider that offers a high level of growth and expansion. The company should also choose a provider that offers a high level of success and achievement. The company should also choose a provider that offers a high level of excellence and quality.

**C.** The company should choose a cloud provider that offers a high level of availability and scalability. The company should also choose a provider that offers a high level of security and compliance. The company should also choose a provider that offers a high level of cost-effectiveness. The company should also choose a provider that offers a high level of flexibility and agility. The company should also choose a provider that offers a high level of reliability and uptime. The company should also choose a provider that offers a high level of performance and speed. The company should also choose a provider that offers a high level of support and service. The company should also choose a provider that offers a high level of innovation and leadership. The company should also choose a provider that offers a high level of partnership and collaboration. The company should also choose a provider that offers a high level of transparency and accountability. The company should also choose a provider that offers a high level of trust and confidence. The company should also choose a provider that offers a high level of satisfaction and loyalty. The company should also choose a provider that offers a high level of growth and expansion. The company should also choose a provider that offers a high level of success and achievement. The company should also choose a provider that offers a high level of excellence and quality.

**D.** The company should choose a cloud provider that offers a high level of availability and scalability. The company should also choose a provider that offers a high level of security and compliance. The company should also choose a provider that offers a high level of cost-effectiveness. The company should also choose a provider that offers a high level of flexibility and agility. The company should also choose a provider that offers a high level of reliability and uptime. The company should also choose a provider that offers a high level of performance and speed. The company should also choose a provider that offers a high level of support and service. The company should also choose a provider that offers a high level of innovation and leadership. The company should also choose a provider that offers a high level of partnership and collaboration. The company should also choose a provider that offers a high level of transparency and accountability. The company should also choose a provider that offers a high level of trust and confidence. The company should also choose a provider that offers a high level of satisfaction and loyalty. The company should also choose a provider that offers a high level of growth and expansion. The company should also choose a provider that offers a high level of success and achievement. The company should also choose a provider that offers a high level of excellence and quality.

**E.** The company should choose a cloud provider that offers a high level of availability and scalability. The company should also choose a provider that offers a high level of security and compliance. The company should also choose a provider that offers a high level of cost-effectiveness. The company should also choose a provider that offers a high level of flexibility and agility. The company should also choose a provider that offers a high level of reliability and uptime. The company should also choose a provider that offers a high level of performance and speed. The company should also choose a provider that offers a high level of support and service. The company should also choose a provider that offers a high level of innovation and leadership. The company should also choose a provider that offers a high level of partnership and collaboration. The company should also choose a provider that offers a high level of transparency and accountability. The company should also choose a provider that offers a high level of trust and confidence. The company should also choose a provider that offers a high level of satisfaction and loyalty. The company should also choose a provider that offers a high level of growth and expansion. The company should also choose a provider that offers a high level of success and achievement. The company should also choose a provider that offers a high level of excellence and quality.
