Explanation:

Step 1 (E): Install the Azure File Sync agent on Server1  
The Azure File Sync agent is a downloadable package that

enables Windows Server to be synced with an Azure file share

Step 2 (D): Register Server1.

Register Windows Server with Storage Sync Service

Registering your Windows Server with a Storage Sync Service establishes a trust relationship between your server (or cluster) and the Storage Sync Service.

Step 3 (C): Create a sync group and a cloud endpoint.

A sync group defines the sync topology for a set of files.

Endpoints within a sync group are kept in sync

with each other. A sync group must contain one cloud endpoint, which represents an Azure file share and

one or more server endpoints. A server endpoint represents a path on registered server.
