Function Purpose ROUND(column|expression, n) Rounds the column,
expression, or value to n decimal places or, if n is omitted,
no decimal places (If n is negative, numbers to the left of
decimal point arerounded.) TRUNC(column|expression, n)
Truncates the column, expression, or value to n decimal places
or, if n is omitted, n defaults to zero The TRIM Function The
TRIM function removes characters from the beginning or end of
character literals, columns or expressions to yield one
potentially shorter character item. Numeric and date literals
are automatically cast as characters when they occur as
parameters to the TRIM function. Numeric or date expressions
are evaluated first before being converted to strings ready to
be trimmed. The TRIM function takes a parameter made up of an
optional and a mandatory component. Its syntax is TRIM
([trailing|leading|both] trimstring from s). The string to be
trimmed (s) is mandatory. The following points list the rules
governing the use of this function:
TRIM(s) removes spaces from both sides of the input string.
TRIM(trailing trimstring from s) removes all occurrences of
trimstring from the end of the string s if it is present.
TRIM(leading trimstring from s) removes all occurrences of
trimstring from the beginning of the string s if it is present.
TRIM(both trimstring from s) removes all occurrences of
trimstring from the beginning and end of
the string s if it is present.
The following queries illustrate the usage of this function:
Query 1: select trim(trailing 'e' from 1+2.14||' is pie') from
dual
Query 2: select trim(both '*' from '*******Hidden*******') from
dual

Query 3: select trim(1 from sysdate) from dual
