D. bucket-owner-read, bucket-owner-write, bucket-owner-no-acl, bucket-owner

Answer: B

Explanation:

https://aws.amazon.com/it/premiumsupport/knowledge-center/s3-bucket-owner-access/ By default, an S3 object is owned by the AWS account that uploaded it. This is true even when the bucket is owned by another account. To get access to the object, the object owner must explicitly grant you (the bucket owner) access. The object owner can grant the bucket owner full control of the object by updating the access control list (ACL) of the object. The object owner can update the ACL either during a put or copy operation, or after the object is added to the bucket.

By adding one printer as the default printer you ensure that only that printer is used at a time, and creating a printing pool to automatically distribute print jobs to the next available printer will cover all the requirements stated in the question. A printing pool is one logical printer connected to multiple printers through multiple ports of the print server. The printer that is idle receives the next document sent to the logical printer.

A printing pool is one logical printer connected to multiple printers through multiple ports of the print server. The printer that is idle receives the next document sent to the logical printer. This is useful in a network with a high volume of printing because it decreases the time users wait for their documents. A printing pool also simplifies administration because multiple printers can be managed from the same logical printer on a server.
