NEW QUESTION: 1

When an action is taken on a risk, which of the following is being done and which document needs to be updated?

- A. Exploiting risk, and the risk register should be updated.
- B. Mitigating risk, and the risk register should be updated
- C. Accepting risk, and the risk review document should be updated
- D. Avoiding risk, and the risk review document should be updated

Answer: B

NEW QUESTION: 2

Your startup has never implemented a formal security policy. Currently, everyone in the company has access to the datasets stored in Google BigQuery. Teams have freedom to use the service as they see fit, and they have not documented their use cases. You have been asked to secure the data warehouse. You need to discover what everyone is doing. What should you do first?

- A. Use the Google Cloud Billing API to see what account the warehouse is being billed to.
- B. Use Stackdriver Monitoring to see the usage of BigQuery query slots.
- C. Use Google Stackdriver Audit Logs to review data access.
- D. Get the identity and access management (IAM) policy of each table

Answer: B

NEW QUESTION: 3

A user has created a VPC with CIDR 20.0.0.0/24. The user has created a public subnet with CIDR 20.0.0.0/25. The user is trying to create the private subnet with CIDR 20.0.0.128/25. Which of the below mentioned statements is true in this scenario?

- A. It will not allow the user to create a private subnet due to a wrong CIDR range
- B. It will not allow the user to create the private subnet due to a CIDR overlap
- C. It will allow the user to create a private subnet with CIDR as 20.0.0.128/25
- D. This statement is wrong as AWS does not allow CIDR 20.0.0.0/25

Answer: C

Explanation:

Explanation/Reference:

Explanation:

When the user creates a subnet in VPC, he specifies the CIDR block for the subnet. The CIDR block of a subnet can be the same as the CIDR block for the VPC (for a single subnet in the VPC), or a subset (to enable multiple subnets. If the user creates more than one subnet in a VPC, the CIDR blocks of the subnets must not overlap. Thus, in this case the user has created a VPC with the CIDR block 20.0.0.0/24, which supports 256 IP addresses (20.0.0.0 to 20.0.0.255). The user can break this CIDR block into two subnets, each supporting 128 IP addresses. One subnet uses the CIDR block 20.0.0.0/25 (for addresses 20.0.0.0 - 20.0.0.127. and the other uses the CIDR block 20.0.0.128/25 (for addresses 20.0.0.128 - 20.0.0.255).
