Answer: B

NEW QUESTION: 2

You are developing a SQL Server Integration Services (SSIS) package to load data into a data warehouse. The package consists of several data flow tasks.

The package experiences intermittent errors in the data flow tasks.

If any data flow task fails, all package error information must be captured and written to a SQL Server table by using an OLE DB connection manager.

You need to ensure that the package error information is captured and written to the table.

What should you do?

- A.** Create a SQL Server Agent job to execute the SSISDB.catalog.validate_project stored procedure.
- B.** Create a SQL Server Agent job to execute the SSISDB.catalog.validate_package stored procedure.
- C.** Store the System::ExecutionInstanceGUID variable in the custom log table.
- D.** Create a table to store error information. Create an error output on each data flow destination that writes OnTaskFailed event text to the table.
- E.** Use an event handler for OnTaskFailed for the package.
- F.** Deploy the project by using dtutil.exe with the /COPY SQL option.
- G.** View the All Messages subsection of the All Executions report for the package.
- H.** Enable the SSIS log provider for SQL Server for OnError in the package control flow.
- I.** Deploy the .ispac file by using the Integration Services Deployment Wizard.
- J.** View the job history for the SQL Server Agent job.
- K.** Store the System::ServerExecutionID variable in the custom log table.
- L.** Create a table to store error information. Create an error output on each data flow destination that writes OnError event text to the table.
- M.** Store the System::SourceID variable in the custom log table.
- N.** Use an event handler for OnError for each data flow task.
- O.** Create a SQL Server Agent job to execute the SSISDB.catalog.create_execution and SSISDB.catalog.*tart_execution stored procedures.
- P.** Deploy the project by using dtutil.exe with the /COPY DTS option.
- Q.** Use an event handler for OnError for the package.
- R.** Enable the SSIS log provider for SQL Server for OnTaskFailed in the package control flow.

NEW QUESTION: 3

How many VRFs are present in Cisco Nexus OS by default?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:

Explanation

Management VRF and Default VRF

Each router has a management VRF and a default VRF:

Management VRF

The management VRF is for management purposes only.

Only the mgmt 0 interface can be in the management VRF.

The mgmt 0 interface cannot be assigned to another VRF.

The mgmt 0 interface is shared among multiple VDCs.

No routing protocols can run in the management VRF (static only).

Default VRF

All Layer 3 interfaces exist in the default VRF until they are assigned to another VRF.

Routing protocols run in the default VRF context unless another VRF context is specified.

The default VRF uses the default routing context for all show commands.

The default VRF is similar to the global routing table concept in Cisco IOS.
