For more information on S3, please visit the below URL: * <https://aws.amazon.com/s3/Lifecycle> configuration enables you to specify the lifecycle management of objects in a bucket. The configuration is a set of one or more rules, where each rule defines an action for Amazon S3 to apply to a group of objects. These actions can be classified as follows: Transition actions - In which you define when objects transition to another storage class. For example, you may choose to transition objects to the STANDARD_IA (IA, for infrequent access) storage class 30 days after creation, or archive objects to the GLACIER storage class one year after creation. Expiration actions - In which you specify when the objects expire. Then Amazon S3 deletes the expired objects on your behalf.
