NEW QUESTION: 2What is the name of Check Point collaborative network that delivers real-time dynamic security intelligence to Check Point threat prevention blades?**A. ThreatSpectB. ThreatEmulatorC. ThreatCloudD. ThreatWiki****Answer: C**

NEW QUESTION: 3ABC Company's network includes ten ERP-OFDM (802.11g) STAs connecting through a single access point. To help avoid the spread of viruses between wireless users, what should be implemented on the network? (Choose two)**A. Wi-Fi Protected Access version 2 (WPA2)B. Peer-to-peer data blocking in the APC. Personal firewall software on client devicesD. Wireless Intrusion Prevention System (WIPS)E. WLAN protocol analysis software on one laptop****Answer: B, C****Explanation:**Personal firewall software can stop direct attacks from viruses that spread through means such as open ports. Peer-to-peer data blocking prevents WLAN users from communicating with each other across an access point. Since all data between wireless peers is blocked, viruses cannot spread in this fashion. WPA2, whether

Personal or Enterprise, forces authentication and encryption, but still allows users on the same AP to make connections with one another. WIPS can detect different types of layer 2 attacks, but cannot prevent viruses, which is a layer 7 application. Use of protocol analysis software would be no different than use of WIPS.
