**NEW QUESTION: 3**You need to set the appropriate permission levels. A variable named customRole references Wholesale. Which code segment should you add at line UA11? **A.**

customRole.BasePermissions = \_permissions | SPBasePermissions.ViewFormPages; **B.** customRole.BasePermissions = \_permissions | SPBasePermissions.ViewPages; **C.**

customRole.BasePermissions = SPBasePermissions.EmptyMask | SPBasePermissions.ViewPages; **D.** customRole.BasePermissions = SPBasePermissions.ViewPages; **Answer: B**

**Explanation:** Explanation/Reference:Explanation: \* ViewPages, View pages in a Web site. \* Scenario: A custom role named Wholesale must be created. Wholesale customers must be assigned to this role in order to view the promotions page. **Incorrect:** Not A, not C: The previous line, UA10, is: \_permissions =

this.GetExistingPermissions(); We should add this permission and the ViewPages permission. **Not B:** ViewFormPages View forms, views, and application pages, and enumerate lists. **Reference:** SPBasePermissions enumeration

<https://msdn.microsoft.com/en-us/library/microsoft.sharepoint.spbasepermissions.aspx> Testlet 1 Background You are a SharePoint developer working for Litware Inc., a large bicycle manufacturing company. Litware runs an intranet that is based on SharePoint Server 2010, side-by-side with a collaboration space for various departments. The IT department for Litware is migrating a SharePoint 2010 environment to a new SharePoint 2013 farm. Some collaboration site collections are already migrated, including a Marketing site collection. Some of the intranet content must be migrated to the target platform; however, the whole intranet won't be migrated as-is. **Business Requirements** Intranet Litware is redefining its brand identity. It is essential that the new intranet supports a wide variety of mobile devices, platforms, and browsers. Some of the content must be migrated from the old intranet during the implementation. The redesigned intranet must be extensible. The solution must be designed with the changes in the underlying technology in mind. A marketing company named Graphic Design

Institute provides documents and guidelines for the new design for Litware's intranet. CollaborationLitware has the following collaboration requirements: The collaboration space must include a start page containing information about site owners, contact data, and statistics on site usage. This information must be available for each collaboration space, directly after its creation. The project must be delivered in multiple phases. The solution must support changes and updates on the structure and functionality of the collaborationspaces. Marketing collaboration space Auditors must be able to create reports about the documents the Marketing team produces. Initial reports should show document distribution over projects and information about the most active documents, the top inactive documents, and the most active users. Additional reports will be added over time. Technical Requirements Publishing Design for the IntranetLitware will use the following web application for the intranet: <https://intranet.litwareinc.com>. The publishing site design is delivered as a set of HTML files ([litwarepublishing.html](#)), CSS ([Litwarepublishing.css](#)), and image files from the marketing company. A design package must be created for easier deployment over various platforms. During the creation and application of the design package to the publishing site, SharePoint 2013 out-of-the-box capabilities must be used as much as possible to ensure simple design changes and to ease the upgrade procedures. The publishing site must support rendering on a number of devices, starting with Windows Phone 7. Apart from being deployed on all existing publishing sites, the design package must be automatically deployed each time a publishing site is created. A search box must be available on all pages. CollaborationLitware will use two additional web applications for the collaboration: Collaboration 1: <https://collab1.litwareinc.com> Collaboration 2: <https://collab2.litwareinc.com> Most of the features contained within the Team Site template are sufficient; however, a few additions to the template must be made to support the business requirements. In order to achieve this and ensure maximum portability, a web template based on the Team Site site definition must be created. A three-state workflow must be used to manage business processes. A customized default home page must be deployed by using a site feature. Feature IDs: Three-state workflow: FDE5D850-671E-4143-950A-87B473922DC7 Litware Web Artifacts: DBF805AB-03D9-43DC-9154-52D6AC54689F The project must be implemented in phases, so a solution must be developed to support upgrade procedures. As soon as the package containing the web template Litware.Intranet.Templates.wsp is deployed, the Litware Team Site template must be available for use in all site collections. In order to make the solution as extensible as possible, all core functionality should be moved to the separate package Litware.Intranet.Core.wsp. Deployment of the package containing the Litware web templates Litware.Intranet.Templates.wsp must be prevented if the core package is not deployed in order to prevent deployment errors and eventually damage on the site structure itself.

Litware.Intranet.Templates contains two features: The LitwareWebTemplateFeature feature contains the Litware Team Site web template. Templates with this title must be available in the group Litware in the template selection. The LitwareWebArtifacts hidden feature contains code required to run after the provisioning is completed. The LitwareWebArtifacts feature can be activated only if the LitwareWebTemplateFeature feature is activated as well. Marketing site collection An existing marketing collaboration site located in a web application named Collaboration 1 is located at <https://collabl.litwareinc.com/sites/marketing>. Collaboration 1 contains a document library with approximately 9000 documents for approximately 200 projects. The largest project contains 120 files. Documents are assigned to appropriate projects by using the Projects field. The farm uses the default throttle settings. Auditors have access to the page that provides statistics on Marketing documents. This page contains a report on document distribution over projects and information about the most active documents, the top inactive documents, and the most active users. Processing the queries can result in working with huge result sets. You must ensure that the information on this page is always available and that the queries are not throttled. The relevant code segment is available in the code sections area (MarketingAudit.ascx.cs). Application Structure Relevant portions of the app files are shown below. (Line numbers in the code segments are included for reference only and include a two-letter prefix that denotes the specific file to which they belong.) Litware.Intranet.Templates.wsp, Module WebTemplatePropertyBag Element.xml file: MarketingAudit.ascx.cs
