NEW QUESTION: 1
What is the reason for the rear light bar on VMAX3 systems?
A. Identify an issue in the rear of the system
B. Identify the storage bay(s)
C. Assist in locating a bay in a dispersed configuration
D. Automatically flash on the given bay with faulty components
Answer: D

NEW QUESTION: 2

A. logging enable show logging
B. enable logging show logging
C. enable logging int e0/1 view logging
D. logging enable logging view config
Answer: A

NEW QUESTION: 3
You are the project manager for your organization. You need the
oak cabinets for your project delivered by December 1 in order
to install the floors around the oak cabinets by December 15.
Your company's procurement office generally takes 45 days to
complete procurement orders. Based on this information, how
should you schedule the lead time for the cabinet delivery?
A. Cabinet procurement November 15
B. Cabinet procurement December 1, plus 45 days lead time
C. Cabinet procurement December 15 minus 45 days lead time
D. Cabinet procurement December 1, minus 45 days lead time
Answer: D
Explanation:
Explanation/Reference:
Explanation:
The cabinet procurement and delivery must be completed by
December 1. By scheduling the activity to finish on December 1
with minus 45 days lead time for procurement, the cabinets will
arrive by the needed date.
Incorrect Answers:
A: Lead time is always negative time, lag time is positive
time. This choice would cause the cabinets to not arrive until
45 days after December 1.
B: This choice is not the best answer because it does not
necessarily account for holidays, weekends, or other factors in
the project calendar. By scheduling the cabinet for December 1
and working backwards through lead time, the project's PMIS
will account for these breaks in the project work.
D: This choice would cause the cabinets to arrive on December
15 when the floors are to be installed.
