So if you practice our C_ARCON_2208 pdf torrent seriously, your pass rate will up to 80%.

NEW QUESTION: 1JSON Web Token (JWT) is an open standard (RFC 7519) that defines a compact and self-contained way for securely transmitting information between parties as a JSON object. This information can be verified and trusted because it is digitally signed. JWTs can be signed using a secret (with the HMAC algorithm) or a public/private key pair using RSA or ECDSA. JSON Web Tokens are composed of three parts, separated by

A. `header.payload.signature`
B. `header.payload.signature`
C. `header.payload.signature`

D. `header.payload.signature`
Answer: C

Explanation: Explanation JSON Web Token (JWT) is an open standard (RFC 7519) that defines a compact and self-contained way for securely transmitting information between parties as a JSON object. This information can be verified and trusted because it is digitally signed. JWTs can be signed using a secret (with the HMAC algorithm) or a public/private key pair using RSA or ECDSA. JSON Web Tokens are composed of three parts, separated by

a dot (.): Header, Payload, Signature. Therefore, a JWT typically looks like the following:xxxxx.yyyyy.zzzzzzThe header typically consists of two parts: the type of the token, which is JWT, and the signing algorithm being used, such as HMAC SHA256 or RSA.The second part of the token is the payload, which contains the claims. Claims are statements about an entity (typically, the user) and additional data.To create the signature part you have to take the encoded header, the encoded payload, a secret, the algorithm specified in the header, and sign that.

NEW QUESTION: 2Configure AS-path-Filter ip as-path-filtr 10 permit_100\$ means to match the route received from AS100.**A.** False**B.** True**Answer: A**

NEW QUESTION: 4A company's server deployment team needs to introduce many new Windows Server 2012 R2 domain controllers throughout the network into a single Windows Server 2008 R2 domain. The team has chosen to use Windows PowerShell.Which Windows PowerShell module includes the command-line options for installing domain controllers?**A.** AD CS Deployment cmdlets**B.** AD CS Administration cmdlets**C.** AD DS Administration cmdlets**D.** AD DS Deployment cmdlets**Answer: D****Explanation:** Explanation/Reference:Explanation:First use the Import-Module ADDSDeployment command in PowerShell-it includes the cmdlets needed to add new domain controllers. Then run Install-ADDSDomainController along with the required arguments. Quick Tip: DCPromo.exe has been deprecated but can still be used along with an answer file, and ADPrep.exe runs automatically when needed (but can be run with elevated rights for more control).
