**NEW QUESTION: 1**

DRAG DROP

You manage an Azure Web Site in Standard mode at the following address:

contoso.azurewebsites.net.

Your company has a new domain for the site that needs to be accessible by Secure Socket

Layer (SSL) encryption.

You need to be able to add a custom domain to the Azure Web Site and assign an SSL certificate.

Which three steps should you perform next in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

More than one order of answer choices may be correct. You will receive credit for any of the correct orders you select

**Answer:**

Explanation:

Explanation:

First create a CNAME record, then to add the domain name as a custom domain and last add the SNI SSL binding. The advantage of using a CNAME record and a SNI SSL binding is that it does not matter if the IP address of the website changes.
