NEW QUESTION: 3
Data access auditing is a surveillance mechanism that watches
over access to all sensitive information contained within the
database. What are the questions addressed in a perfect data
access auditing solution?
A. For whom was the data accessed?
B. When was the data accessed?
C. Who accessed the data?
D. What was the SQL query that accessed the data?
Answer: B,C,D
Explanation:
The perfect data access auditing solution would address the
following six questions: 1.Who accessed the data? 2.When was
the data accessed? 3.Which computer program or client software
was used to access the data? 4.From what location on the
network was the data accessed? 5.What was the SQL query that
accessed the data? 6.Was access to the data successfully done;
and if so, how many rows of data were retrieved?

Answer C is incorrect. In the perfect data access auditing solution, it cannot be determined for whom the data is being accessed. Only the person accessing the data can be identified.
