Our SAA-C02-KR braindumps are updated and latest questions, the question and answer format will make it easier to prepare for the test, Are the update free, With the advent of the era of knowledge-based [Latest Industries-CPQ-Developer Exam Questions](#) [Vce](#) economy, a man without a sound academic background can hardly accomplish anything.

Selecting The SAA-C02-KR Vce Format Means that You Have Passed Amazon AWS Certified Solutions Architect - Associate (SAA-C02 Korean Version)

Our support staff available here 24/7 you can ask anything about your exam or you can ask for demo of your desired exam, You do not have to fear SAA-C02-KR certification if you are preparing with SAA-C02-KR from Soaj online preparation materials and the cutting edge latest SAA-C02-KR from Soaj exam engine for your SAA-C02-KR test.

Excellent service Amazon exam is highly respected and recognized globally, and getting this exam is worth every investment you make, As you can see, they are very familiar with the SAA-C02-KR actual exam.

Our SAA-C02-KR exam materials are the most reliable products for customers, There is no reason of losing the exam, if you just make sure that you have prepared all the questions and answers in our dumps Testing Engine file.

We promise you "Pass Guaranteed" & "Money Back Guaranteed", Advance study in Amazon AWS Certified Associate SAA-C02-KR would help professionals get ahead in their AWS Certified Associate career.

Different versions have different advantages, but you [SAA-C02-KR](#) can choose any combination of the different version, You do not need to reiterate all the knowledge anymore, because our SAA-C02-KR exam collection materials cover all the points for your reference with updates according to the trend of exam at intervals.

SAA-C02-KR Study Tool - SAA-C02-KR Test Torrent & Amazon AWS Certified Solutions Architect - Associate (SAA-C02 Korean Version) Guide Torrent

SAA-C02-KR practice guide will be a good study tool and will give you a good guidance, you will prepare for the actual exam with high efficiency, In addition, Soaj offer you the best valid SAA-C02-KR training pdf, which can ensure you 100% pass.

We provide 24-hour service every day and await your visit respectfully, Now you can become SAA-C02-KR certified professional with Dumps preparation material, Once you decide to buy SAA-C02-KR valid vce from our website, you will be allowed to free update your SAA-C02-KR valid dumps one-year.

Our SAA-C02-KR practice materials are motivating materials especially suitable for those exam candidates who are eager to pass the exam with efficiency, Our study guide has arranged all the knowledge about the exam for you to learn.

NEW QUESTION: 1 Background Corporate Information Fabrikam, Inc. is a retailer that sells electronics products on the Internet. The company has a headquarters site and one satellite sales office. You have been hired as the database administrator, and the company wants you to change the architecture of the Fabrikam e-commerce site to optimize performance and reduce downtime while keeping capital expenditures to a minimum. To help with the solution, Fabrikam has decided to use cloud resources as well as on-premise servers. Physical Locations All of the corporate executives, product managers, and support staff are stationed at the headquarters office. Half of the sales force works at this location. There is also a satellite sales office. The other half of the sales force works at the satellite office in order to have sales people closer to clients in that area. Only sales people work at the satellite location. Problem Statement To be successful, Fabrikam needs a website that is fast and has a high degree of system uptime. The current system operates on a single server and the company is not happy with the single point of failure this presents. The current nightly backups have been failing due to insufficient space on the available drives and manual drive cleanup often needing to happen to get past the errors. Additional space will not be made available for backups on the HQ or satellite servers.

During your investigation, you discover that the sales force reports are causing significant contention. Configuration Windows Logins The network administrators have set up Windows groups to make it easier to manage security. Users may belong to more than one group depending on their role. The groups have been set up as shown in the following table:

Server Configuration The IT department has configured two physical servers with Microsoft Windows Server 2012 R2 and SQL Server 2014 Enterprise Edition and one Windows Azure Server. There are two tiers of storage available for use by database files only a fast tier and a slower tier. Currently the data and log files are stored on the fast tier of storage only. If a possible use case exists, management would like to utilize the slower tier storage for data files. The servers are configured as shown in the following table:

Database Currently all information is stored in a single database called ProdDB, created with the following script:

The Product table is in the Production schema owned by the ProductionStaff Windows group. It is the main table in the system so access to information in the Product table should be as fast as possible. The columns in the Product table are defined as shown in the following table:

The SalesOrderDetail table holds the details about each sale. It is in the Sales schema owned by the SalesStaff Windows group. This table is constantly being updated, inserted into, and read. The columns in the SalesOrderDetail table are defined as shown in the following table:

Database Issues The current database does not perform well. Additionally, a recent disk problem caused the system to go down, resulting in lost sales revenue. In reviewing the current system, you found that there are no automated maintenance procedures. The database is severely fragmented, and everyone has read and write access.

Requirements Database The database should be configured to maximize uptime and to ensure that very little data is lost in the event of a server failure. To help with performance, the database needs to be modified so that it can support in-memory data, specifically for the Product table, which the CIO has indicated should be a memory optimized table. The auto-update statistics option is set off on this database. Only product managers are allowed to add products or to make changes to the name, description, price, cost, and supplier. The changes are made in an internal database and pushed to the Product table in ProdDB during system maintenance time. Product managers and others working at the headquarters location also should be able to generate reports that include supplier and cost information.

Customer data access Customers access the company's website to order products, so they must be able to read product information such as name, description, and price from the Product table. When customers place orders, stored procedures called by the website update product quantity on-hand values. This means the product table is constantly updated at random times.

Customer support data access Customer support representatives need to be able to view and not update or change product information. Management does not want the customer support representatives to be able

to see the product cost or any supplier information. Sales force data access Sales people at both the headquarters office and the satellite office must generate reports that read from the Product and SalesOrderDetail tables. No updates or inserts are ever made by sales people. These reports are run at random times and there can be no reporting downtime to refresh the data set except during the monthly maintenance window. The reports that run from the satellite office are process intensive queries with large data sets. Regardless of which office runs a sales force report, the SalesOrderDetail table should only return valid, committed order data; any orders not yet committed should be ignored.

Historical Data The system should keep historical information about customers who access the site so that sales people can see how frequently customers log in and how long they stay on the site. The information should be stored in a table called Customer Access. Supporting this requirement should have minimal impact on production website performance.

Backups The recovery strategy for Fabrikam needs to include the ability to do point in time restores and minimize the risk of data loss by performing transaction log backups every 15 minutes.

Database Maintenance The company has defined a maintenance window every month when the server can be unavailable. Any maintenance functions that require exclusive access should be accomplished during that window.

Project milestones completed Revoked all existing read and write access to the database, leaving the schema ownership in place. Configured an Azure storage container secured with the storage account name MyStorageAccount with the primary access key StorageAccountKey on the cloud file server.

SQL Server 2014 has been configured on the satellite server and is ready for use. On each database server, the fast storage has been assigned to drive letter F:, and the slow storage has been assigned to drive letter D:. You need to change the ProdDB database. Which two database options should you change to meet the requirements? Each correct answer presents part of the solution. (Choose two.)

A. CONTAINS MEMORY OPTIMIZED DATA
B. Change recovery model to FULL
C. COLLATE IN MEMORY
D. CONTAINS FILESTREAM
E. CONTAINMENT = PARTIAL
F. Change recovery model to BULK_LOGGED

Answer: A, C

Explanation: Explanation/Reference: Explanation: Scenario: To help with performance, the database needs to be modified so that it can support in-memory data, specifically for the Product table, which the CIO has indicated should be a memory-optimized table.

Collations and Code Pages
FileGroupDefinition.ContainsMemoryOptimizedData Property (Microsoft.SqlServer.TransactSql.ScriptDom)

NEW QUESTION: 2 Attributable data should be:

A. never traced to individuals responsible for observing and recording the data
B. often traced to individuals responsible for observing and recording the data
C. always traced to individuals responsible for observing and recording the data
D. sometimes traced to individuals responsible for observing and recording the data

Answer: C

Explanation: Explanation/Reference: As per FDA data

should be attributable, original, accurate, contemporaneous and legible. In an automated system attributability could be achieved by a computer system designed to identify individuals responsible for any input. Source: U.S. Department of Health and Human Services, Food and Drug Administration, Guidance for Industry - Computerized Systems Used in Clinical Trials, April 1999, page 1.

NEW QUESTION: 3 You company has a Microsoft Azure Active Directory (Azure AD) tenant that contains the users shown in the following table. The tenant includes a security group named Admin1. Admin1 will be used to manage administrative accounts. You need to identify which users can perform the following administrative tasks: * Create guest user accounts. * Add User3 to Admin1. Which users should you identify for each task? To answer, select the appropriate options in the answer area. **NOTE:** Each correct selection is worth one point. **Answer:** Explanation: Explanation References: <https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/directory-assign-admin-roles>

NEW QUESTION: 4 Based on the exhibited output, Which three statements are true? (Choose three.) **A.** All the routes are in the passive mode because R1 is in the query process for those routes. **B.** 40512000 is the advertised distance (AD) via 192.168.1.66 to reach the 192.168.1.48/28 prefix. **C.** R1 is in AS 200. **D.** The best path for R1 to reach the 192.168.1.48/28 prefix is via 192.168.1.66. **E.** All the routes are in the passive mode because these routes are in the hold-down state. **F.** R1 will load balance between three paths to reach the 192.168.1.48/28 prefix because all three paths have the same advertised distance (AD) of 40512000. **Answer: B, C, D** Explanation: It can be determined that AS 200 is used, from the fact that the IS-IS process ID is labeled as 200. The best path to reach the network 192.168.1.48/28 is the first one displayed in the routing table. This can be further demonstrated by the fact that the metric is less than the alternative route, via serial 0. Finally, the AD can be found by viewing the second number within the parentheses, which in this case is 40512000.
