**Answer: B**

**NEW QUESTION: 2**

The following portion of the test includes several Case Studies. Each Case Study includes introductory information about a specific company or audit situation, followed immediately by a set of questions related to the situation described and various audit-related documents, identified by company name.

All of the audit-related documents for these Case Studies are presented in a separate booklet labeled:

CONFIDENTIAL

Audit Documents

These documents were drawn from actual companies and are designed to be examples of genuine audit materials. Their format and contents have not been altered, and they are intended to represent working documents from everyday situations.

Although the documents for the Case Studies are presented separately, the test will be scored as a whole, on a total of 150 questions. You may go back and check your work on any part of the examination until time is called at the end of the testing period.

Two auditors are conducting an internal audit of the Quality Electronics and Elements Co. (QEE) system procedures. During the first day of the audit, the following observations were made.

An outbound carton with obvious damage was examined by the auditor on the shipping dock.

A shipment of six (6) boxes to Allied Supply was returned because the customer-required certifications

did not accompany the product.

Unsigned product verification documents were found on stored products.

Of three (3) cartons found in the accepted materials station, only two of the cartons had labels

indicating their contents. When the auditor pointed this out, a customer service representative immediately affixed the proper label to the one unlabeled carton.

The auditor also found that "Accepted Material Traveler Cards" were not attached to any of the cartons

in the accepted materials station.

During the second day of the audit, another unlabeled product container was delivered to the accepted materials station. When the auditor noted the lack of label, the auditee immediately filled out a label and affixed it to the container. In this situation, the auditor should do which of the following?

- A. Write a finding because an improperly identified container could be shipped.
- B. Write a finding against the Receiving department.
- C. Write a finding to encourage a root cause analysis.
- D. Write an observation that the auditee identified the container properly.

**Answer: C**

### **NEW QUESTION: 3**

Which three statements are true about Oracle Data Pump export and import operations?

- A. Data pump import requires the import file to be in a directory owned by the oracle owner.
- B. You can detach from a data pump export job and reattach later.
- C. You can detach from a data pump import job and reattach later.
- D. The master table is the last object to be exported by the data pump.
- E. Data pump uses parallel execution server processes to implement parallel import.

**Answer: B,D,E**

Explanation:

B: Data Pump can employ multiple worker processes, running in parallel, to increase job performance.

D: For export jobs, the master table records the location of database objects within a dump file set.

/ Export builds and maintains the master table for the duration of the job. At the end of an export job, the content of the master table is written to a file in the dump file set.

/ For import jobs, the master table is loaded from the dump file set and is used to control the sequence of operations for locating objects that need to be imported into the target database.

### **NEW QUESTION: 4**

Refer to the exhibit.

Which of the following two are advantages of Server

virtualization using VMware vSphere?

(Choose two)

- A.** New functional servers can be deployed with minimal physical changes on the network
- B.** Enables the live migration of a virtual server from one physical server to another without disruption to users or loss of services
- C.** Provides management functions including the ability to run scripts and to install third-party agents for hardware monitoring, backup, or systems management
- D.** The access layer of the network moves into the vSphere ESX servers, providing streamlined vSphere management
- E.** Retains the one-to-one relationship between switch ports and functional servers

**Answer: B,C**
