-- Exhibit -

Click the Exhibit button.

A user attempted to form a chassis cluster on an SRX240; however, the cluster did not form. While investigating the problem, you see the output shown in the exhibit.

What is causing the problem?

- A. The cluster IDs do not match.
- B. The ge-0/0/0 interface is configured.
- C. The fxp0 interface is not configured.
- D. The configurations are not identical.

Answer: B

NEW QUESTION: 2

You applied a prepayment amount of \$5,000 USD to a \$10,000 USD invoice. At the time of prepayment, the applicable tax rate was 5% (\$250 USD); at the time of invoice creation, the tax rate is 10%. When you set up taxes, you choose to Recalculate Taxes for the Applied Amount Handling option.

How will the resulting tax be calculated?

- A. The tax for the prepayment is recalculated to use the new invoice tax rate that is also used for the invoice line amount. The two generated tax lines show \$1,000 USD (10% * 10,000) for the invoice line tax amount and a prepayment tax line of -500 USD (10% * -5000).
- B. The tax calculation creates two tax lines: one for the invoice line amount and one for the prepayment with a negative amount. The two generated tax lines show \$1,000 USD (10% * 10,000) for the invoice line tax amount and a prepayment tax line of -250 USD (5% * -5000).
- C. The tax calculated on the prepayment is reversed completely and the tax rate applied to the invoice line is retained.

D. The tax for the prepayment is recalculated and the generated tax line amount will be \$250 USD (5% * 10,000-5000).

Answer: A

Explanation:

Explanation

When you apply a prepayment to an invoice, the tax rate at the time of prepayment may differ from the tax rate at the time that the prepayment is applied to an invoice. Oracle Fusion Tax considers the tax calculated on the prepayment according to the value assigned to the Applied Amount Handling option in the tax record. The values are Recalculated and Prorated.

For example, you apply a prepayment amount of 5,000 USD to an invoice with a total amount of 10,000 USD.

At the time of prepayment, the applicable tax rate was 5% (250 USD tax on the prepayment); at the time of invoice creation, the applicable tax rate is 10%. Tax is calculated in this way:

* Recalculated: The tax is recalculated on the prepayment using the invoice tax rate and the same tax rate is applied to the invoice line amount. The tax calculation creates two tax lines: one for the invoice line amount and one for the prepayment with a negative amount. In the invoice example, the calculation creates an invoice line amount tax line of 1,000 USD (10% * 10,000 USD) and a prepayment tax line of -500 USD (10% * -5000 USD). This reverses tax calculated on the invoice for the prepayment amount applied. The tax calculated on the prepayment is retained.

* Prorated: Etc.

NEW QUESTION: 3

Which of the following may be used to document the outcomes of a workshop?

- A. Brainwriting.
- B. Mind maps.
- C. Stepwise refinement.
- D. Round robin.

Answer: B

NEW QUESTION: 4

Which of the following is a best practice for documenting the outcomes of a workshop?

A. Brainwriting.

B. Mind maps.

C. Stepwise refinement.

D. Round robin.

- A. Amazon EC2 Auto Scaling
 B. AWS Lambda
 C. Amazon EC2 Auto Scaling
 D. AWS Lambda
- Answer: D**
