**NEW QUESTION: 1**

Which two options are available in the Section Order field on the Create Questionnaire Template Contents page when creating questionnaire template? (Choose two.)

- A. Random
- B. Ascending
- C. Manual
- D. Descending
- E. Sequential

**Answer: A,E**

**NEW QUESTION: 2**

What is the effect of specifying the "ENABLE PLUGGABLE DATABASE" clause in a "CREATE DATABASE" statement?

- A. It will create a CDB that must be plugged into an existing CDB.

- B. It will create a CDB with root opened and seed read only.
- C. It will create a CDB with root and seed opened and one PDB mounted.
- D. It will create a multitenant container database (CDB) with only the root opened.
- E. It will create a CDB with root opened and seed mounted.

**Answer: B**

Explanation:

Explanation

\* The CREATE DATABASE ... ENABLE PLUGGABLE DATABASE SQL statement creates a new CDB. If you do not specify the ENABLE PLUGGABLE DATABASE clause, then the newly created database is a non-CDB and can never contain PDBs.

Along with the root (CDB\$ROOT), Oracle Database automatically creates a seed PDB (PDB\$SEED). The following graphic shows a newly created CDB:

\* Creating a PDB

Rather than constructing the data dictionary tables that define an empty PDB from scratch, and then populating its Obj\$ and Dependency\$ tables, the empty PDB is created when the CDB is created. (Here, we use empty to mean containing no customer-created artifacts.) It is referred to as the seed PDB and has the name PDB\$Seed. Every CDB non-negotiably contains a seed PDB; it is non-negotiably always open in read-only mode. This has no conceptual significance; rather, it is just an optimization device. The create PDB operation is implemented as a special case of the clone PDB operation.

### **NEW QUESTION: 3**

To secure an application after a large data breach, an e-commerce site will be resetting all users' credentials. Which of the following will BEST ensure the site's users are not compromised after the reset?

- A. A geofencing policy based on login history
- B. Encrypted credentials in transit
- C. Account lockout after three failed attempts
- D. A password reuse policy

**Answer: B**
