NEW QUESTION: 2Your network contains two servers named Server1 and Server2 that run Windows Server 2012. Server1 is a DHCP server that is configured to have a scope named Scopel. Server2 is configured to obtain an IP address automatically. In Scopel, you create a reservation named Res_Server2 for Server2. A technician replaces the network adapter on Server2. You need to

ensure that Server2 can obtain the same IP address. What should you modify on Server1?
A. The Name Protection settings of Scope1
B. The Advanced settings of Res_Server2
C. The MAC address of Res_Server2
D. The Network Access Protection Settings of Scope1

Answer: C
Explanation: For clients that require a constant IP address, you can either manually configure a static IP address, or assign a reservation on the DHCP server. Reservations are permanent lease assignments that are used to ensure that a specified client on a subnet can always use the same IP address. You can use DHCP reservations for hosts that require a consistent IP address, but do not need to be statically configured. DHCP reservations provide a mechanism by which IP addresses may be permanently assigned to a specific client based on the MAC address of that client. The MAC address of a Windows client can be found running the ipconfig /all command. For Linux systems the corresponding command is ifconfig -a. Once the MAC address has been identified, the reservation may be configured using either the DHCP console or at the command prompt using the netsh tool.

NEW QUESTION: 3 You are implementing a secure network. The network contains a DHCP server named Server1 that runs Windows Server 2016. You create a DHCP allow filter that contains all of the computers on the network that are authorized to receive IP addresses. You discover that unauthorized computers can obtain an IP address from Server1. You need to ensure that only authorized computers can receive an IP address from Server1. Solution: You run the following command: Add-DHCPServer4Filter -ComputerName Server1 -MacAddress -List Allow Does this meet the goal?
A. Yes
B. No
Answer: B
Explanation: Explanation the cmdlet "Add-DHCPServer4Filter" does not exist. There is another very similar cmdlet "Add-DhcpServerv4Filter" with the "v" before the "4" letter. The correct cmdlet should be "Set-DHCPServerv4FilterList".
