**NEW QUESTION: 2**

Jonathan plans to integrate external XML data using IBM digital data connector (DDC).

Which of these must he use to map the external XML data structure to the data attributes used by IBM Web Content Manager Design components?

- A. a list rendering profile
- B. a bean list
- C. an XML DDC plug-in
- D. a list rendering context

**Answer: A**

Explanation:

A list-rendering profile defines the set of attributes available in the beans that are contained in bean lists that a DDC plug-in generates. Furthermore, the generic XML DDC plug-in supports listrendering profiles to define the mapping between the XML data structure and the actual attribute values. You define this mapping by associating the attribute definitions in the profile with individual XPath expressions.
