Explanation:

Explanation

Step 1: Download the OVA file for the collection appliance
Azure Migrate uses an on-premises VM called the collector
appliance, to discover information about your on-premises
machines. To create the appliance, you download a setup file in
Open Virtualization Appliance (.ova) format, and import it as a
VM on your on-premises vCenter Server.
Step 2: Create a migration group in the project
For the purposes of assessment, you gather the discovered VMs
into groups. For example, you might group VMs that run the same
application. For more precise grouping, you can use dependency
visualization to view dependencies of a specific machine, or
for all machines in a group and refine the group.
Step 3: Create an assessment in the project
After a group is defined, you create an assessment for it.
