**NEW QUESTION: 3**You maintain a database named DB1 that has a nonpartitioned table. You create an index in the table. Automatic statistics updates are disabled. Users report that some Microsoft SQL Server Reporting Service (SSRS) queries take a long time to run. You determine that the issue is caused by stale statistics for Index1. You need to update the statistics for the index. What should you do?  
**A.** Run the UPDATE STATISTICS command with the COLUMNS option.  
**B.** Run the system stored procedure sp\_updatestats.  
**C.** Set the value of the Database Read-Only property to True.  
**D.** Run DBCC INDEXDEFRAG  
**Answer: A**  
**Explanation:** Explanation/Reference: Explanation: UPDATE STATISTICS updates query optimization statistics on a table or indexed view. The ALL | COLUMNS | INDEX options update all existing statistics, statistics created on one or more columns, or statistics created for indexes. If none of the options are specified, the UPDATE STATISTICS statement updates all statistics on the table or indexed view. Note: You can update query optimization statistics on a table or indexed view in SQL Server by using SQL Server Management Studio or Transact-SQL. By default, the query optimizer already updates statistics as necessary to improve the query plan; in some cases you can improve query performance by using UPDATE STATISTICS or the stored procedure sp\_updatestats to update statistics more frequently than the default updates.
