**NEW QUESTION: 1**

Which of the following is not a hashing algorithm?

- A. SHA-1
- B. MD5
- C. SHA-256
- D. X.509

**Answer: D**

**NEW QUESTION: 2**

Change management procedures to ensure that disaster recovery/business continuity plans are kept up-to-date can be BEST achieved through which of the following?

- A. Comprehensive walk-through testing
- B. Periodic audits of the disaster recovery/business continuity plans
- C. Inclusion as a required step in the system life cycle process
- D. Reconciliation of the annual systems inventory to the disaster recovery, business continuity plans

**Answer: C**

Explanation:

Explanation/Reference:

Explanation:

Information security should be an integral component of the development cycle; thus, it should be included at the process level. Choices A, B and C are good mechanisms to ensure compliance, but would not be nearly as timely in ensuring that the plans are always up-to-date. Choice D is a preventive control, while choices A, B and C are detective controls.

**NEW QUESTION: 3**

Scenario: A company has two Amazon EC2 instances in an Availability Zone. The instances are connected to an Amazon S3 bucket. The company wants to ensure that the data is replicated to another Availability Zone for high availability.

Which of the following is the best solution to meet this requirement?  
A. Configure the Amazon S3 bucket to use Cross-Region Replication (CRR) to replicate data to another Availability Zone.  
B. Configure the Amazon S3 bucket to use Multi-AZ Availability for data replication.  
C. Configure the Amazon S3 bucket to use Multi-Region Availability for data replication.  
D. Configure the Amazon S3 bucket to use Multi-AZ Availability for data replication and Multi-Region Availability for data replication.

Scenario: A company has two Amazon EC2 instances in an Availability Zone. The instances are connected to an Amazon S3 bucket. The company wants to ensure that the data is replicated to another Availability Zone for high availability.

- A. Configure the Application Load Balancer to send the request to both servers Return each document from the correct server
- B. Copy the data so both EBS volumes contain all the documents

**C.** Copy the data from both EBS volumes to Amazon EFS Modify the application to save new documents to Amazon EFS

**D.** Configure the Application Load Balancer to direct a user to the server with the documents

**Answer: C**

Explanation:

Explanation

<https://docs.aws.amazon.com/efs/latest/ug/how-it-works.html#how-it-works-ec2> Amazon EFS provides file storage in the AWS Cloud. With Amazon EFS, you can create a file system, mount the file system on an Amazon EC2 instance, and then read and write data to and from your file system. You can mount an Amazon EFS file system in your VPC, through the Network File System versions 4.0 and 4.1 (NFSv4) protocol. We recommend using a current generation Linux NFSv4.1 client, such as those found in the latest Amazon Linux, Redhat, and Ubuntu AMIs, in conjunction with the Amazon EFS Mount Helper. For instructions, see Using the amazon-efs-utils Tools.

For a list of Amazon EC2 Linux Amazon Machine Images (AMIs) that support this protocol, see NFS Support. For some AMIs, you'll need to install an NFS client to mount your file system on your Amazon EC2 instance. For instructions, see Installing the NFS Client.

You can access your Amazon EFS file system concurrently from multiple NFS clients, so applications that scale beyond a single connection can access a file system. Amazon EC2 instances running in multiple Availability Zones within the same AWS Region can access the file system, so that many users can access and share a common data source.

How Amazon EFS Works with Amazon EC2

<https://docs.aws.amazon.com/efs/latest/ug/how-it-works.html#how-it-works-ec2>

#### **NEW QUESTION: 4**

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. Each correct selection is worth one point.

Hot Area:

**Answer:**
