NEW QUESTION: 4

Virus scanning and content inspection of SMIME encrypted e-mail without doing any further processing is:

- A.** It is possible only if X509 Version 3 certificates are used
- B.** Only possible with key recovery scheme of all user keys
- C.** It is possible only by "brute force" decryption
- D.** Not possible

Answer: D

Explanation:

Content security measures presume that the content is available in cleartext on the central mail server.

Encrypted emails have to be decrypted before it can be filtered (e.g. to detect viruses), so you need the decryption key on the central "crypto mail server".

There are several ways for such key management, e.g. by message or key recovery methods. However, that would certainly require further processing in order to achieve such goal.
