So if you purchase our C-THR95-2211 practice test online, just practice them about 2 hours a day regularly and persistently, you can successfully pass the test.

NEW QUESTION: 1A. Get-SPTimerJob**B.** Disable-SPTimerJob**C.** Start-SPTimerJob**D.** Set-SPTimerJob**E.** Enable-SPTimerJob**Answer: D**

NEW QUESTION: 2You create a global group named RODC_Admins.You need to provide the members of RODC_Admins with the ability to manage the hardware and the software on R0DC1. The solution

must not provide RODC_Admins with the ability to manage Active Directory objects. What should you do? **A.** From a command prompt, run the dsadd computer command. **B.** From Active Directory Users and Computers, configure the Managed By settings of the RODC1 account. **C.** From Active Directory Users and Computers, run the Delegation of Control Wizard. **D.** From Active Directory Site and Services, configure the Security settings of the RODC1 server object. **Answer: B**
Explanation: Modify the Managed By tab of the RODC account properties in the Active Directory Users and Computers snap-in, as shown in the following figure. You can click Change to change which security principal is the delegated RODC administrator. You can choose only one security principal. Specify a security group rather than an individual user so you can control RODC administration permissions most efficiently. This method changes the managedBy attribute of the computer object that corresponds to the RODC to the SID of the security principal that you specify. This is the recommended way to specify the delegated RODC administrator account because the information is stored in AD DS, where it can be centrally managed by domain administrators. Managed By tab on an RODC Properties sheet
Incorrect: Not A: You delegate administration of a domain or organizational unit by using the Delegation of Control wizard available in the Active Directory Users and Computers snap-in. Not B: dsadd group just adds a group to the Active Directory

NEW QUESTION: 3 **A.** Option E **B.** Option C **C.** Option A **D.** Option B **E.** Option D
Answer: D
Explanation: Explanation AD FS creates a self-signed certificate by default. You are able to modify this certificate to a CA-issued certificate by using the AD FS management snap-in. Therefore, it stands to reason that to identify which certificate is used for token signing between the on-premises environment and Office 365, you would have to access the AD FS 2.0 Management console. NEW QUESTION: 4 A system administrator is using a packet sniffer to troubleshoot remote authentication. The administrator detects a device trying to communicate to TCP port 49. Which of the following authentication methods is MOST likely being attempted? **A.** Kerberos **B.** TACACS+ **C.** LDAP **D.** RADIUS
Answer: B
Explanation: TACACS makes use of TCP port 49 by default.
