NEW QUESTION: 1

- A. Option A
- B. Option D
- C. Option C
- D. Option B

Answer: B

Explanation:

Explanation

For access to any AWS service, the ideal approach for any application is to use Roles. This is the first preference. Hence option A and C are wrong.

For more information on IAM policies please refer to the below link:

http://docs.aws.amazon.com/IAM/latest/UserGuide/access_policies.html
Next for any web application, you need to use web identity federation. Hence option D is the right option. This along with the usage of roles is highly stressed in the AWS documentation. "When you write such an app, you'll make requests to AWS services that must be signed with an AWS access key. However, we strongly recommend that you do not embed or distribute long-term AWS credentials with apps that a user downloads to a device, even in an encrypted store. Instead, build your app so that it requests temporary AWS security credentials dynamically when needed using web identity federation. The supplied temporary credentials map to an AWS role that has only the permissions needed to perform the tasks required by the mobile app".
For more information on web identity federation please refer to the below link:
http://docs.aws.amazon.com/IAM/latest/UserGuide/id_roles_providers_oidc.html
