NEW QUESTION: 1

What kind of system handles incoming calls by recognizing the caller, uses a program that decides who should answer the call, and plays a recorded greeting in case the caller has to wait?

- A. Interactive voice response
- B. Voice mail
- C. ACD

D. Automated attendant

Answer: B

NEW QUESTION: 2

- A. Update-AdfsRelyingPartyTrust
- B. Set-AdfsFarmInformation
- C. Set-AdfsProperties
- D. Invoke-AdfsFarmBehaviorLevelRaise

Answer: D

Explanation:

Explanation

AD FS for Windows Server 2016 introduces the ability to have separation between server administrators and AD FS service administrators.

After upgrading our ADFS servers to Windows Server 2016, the last step is to raise the Farm Behavior Level using the Invoke-AdfsFarmBehaviorLevelRaise PowerShell cmdlet.

To upgrade the farm behavior level from Windows Server 2012 R2 to Windows Server 2016 use the Invoke-ADFSFarmBehaviorLevelRaise cmdlet.

NEW QUESTION: 3

What is the primary role of cross certification?

- A. Prevent the nullification of user certificates by CA certificate revocation
- B. Creating trust between different PKIs
- C. Build an overall PKI hierarchy
- D. set up direct trust to a second root CA

Answer: B

Explanation:

Explanation/Reference:

More and more organizations are setting up their own internal PKIs. When these independent PKIs need to interconnect to allow for secure communication to take place (either between departments or different companies), there must be a way for the two root CAs to trust each other.

These two CAs do not have a CA above them they can both trust, so they must carry out cross certification. A cross certification is the process undertaken by CAs to establish a trust relationship in which they rely upon each other's digital certificates and public keys as if they had issued them themselves.

When this is set up, a CA for one company can validate digital certificates from the other company and vice versa.
