**Answer: A,B**

Explanation:

Explanation/Reference:

Explanation:

The network discovers EnergyWise manageable devices, monitors the power consumed, and takes action to reduce power consumption while maintaining business productivity. Power levels and priority levels provide fine-grained control of how network infrastructure and endpoints react to network-based control signals. High-priority devices do not shed load, while lower priority devices can shut down or reduce power.

Device location enables customers to understand power by device type, device label, and device location.

Network intelligence acts as a proxy, allowing easy communication with diverse endpoints and enhanced scalability. A well-established toolkit allows easy migration of third-party endpoints to be EnergyWise endpoints as well as encourage management partners to take advantage of the unique network-based query mechanism offered by Cisco EnergyWise
