Explanation:

To communicate with the worker role, a web role instance places messages on to a queue.

A worker role instance polls the queue for new messages, retrieves them, and processes them. There are a couple of important things to know about the way the queue service works in Azure. First, you reference a queue by name, and multiple role instances can share a single queue. Second, there is no

concept of a typed message; you construct a message from either a string or a byte array. An individual message can be no more than

64 kilobytes (KB) in size.
