**Answer:**

Explanation:

See the explanation below.

Explanation

Step 1: Create a workspace

Azure Monitor can collect data directly from your Azure virtual machines into a Log Analytics workspace for detailed analysis and correlation.

1. In the Azure portal, select All services. In the list of resources, type Log Analytics. As you begin typing, the list filters based on your input. Select Log Analytics workspaces.

2. Select Create, and then select choices for the following items:

3. After providing the required information on the Log Analytics workspace pane, select OK.

While the information is verified and the workspace is created, you can track its progress under Notifications from the menu.

Step 2: Enable the Log Analytics VM Extension

Installing the Log Analytics VM extension for Windows and Linux allows Azure Monitor to collect data from your Azure VMs.

1. In the Azure portal, select All services found in the upper left-hand corner. In the list of resources, type Log Analytics. As you begin typing, the list filters based on your input.

Select Log Analytics workspaces.

2. In your list of Log Analytics workspaces, select DefaultWorkspace (the name you created in step 1).

3. On the left-hand menu, under Workspace Data Sources, select Virtual machines.

4. In the list of Virtual machines, select a virtual machine you want to install the agent on. Notice that the Log Analytics connection status for the VM indicates that it is Not connected.

5. In the details for your virtual machine, select Connect. The agent is automatically installed and configured for your Log Analytics workspace. This process takes a few minutes, during which time the Status shows Connecting.

After you install and connect the agent, the Log Analytics connection status will be updated with This workspace.

**NEW QUESTION: 2**

An administrator wishes to prevent users from accessing

an IP phone attempt to register with the Cisco Unified Communications Manager group?

**A.** The IP phone will go through the list from first server to last server listed in the Cisco Unified Communications Manager group list.

**B.** The IP phone uses the list of servers contained in its associated device pool.

**C.** The IP phone uses the server listed in its device configuration.

**D.** The IP phone starts with Publisher, then moves to the first and second listed subscribers in the Cisco Unified Communications Manager group list.

**Answer: B**

Explanation:

Link:

[http://www.cisco.com/en/US/docs/voice\\_ip\\_comm/cucm/admin/8\\_5\\_1/ccmfeat/fslrg.html](http://www.cisco.com/en/US/docs/voice_ip_comm/cucm/admin/8_5_1/ccmfeat/fslrg.html)

IP phone first search for subscriber and doesn't have any device pool.
