NEW QUESTION: 1
A deployment professional is configuring IBM Security Access Manager V9.0 for Management Authentication using remote LDAP. Which configuration field value is optional?

A. Select Local Database or Remote LDAP Server
B. Enable SSL to LDAP
C. Specify whether or not to bind anonymously
D. Configure Administrative Group DN
Answer: D

NEW QUESTION: 2
You have an Active Directory Rights Management Services (AD RMS) cluster.
You need to prevent users from encrypting new content. The solution must ensure that the users can continue to decrypt content that was encrypted already.
Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)
A. From the Active Directory Rights Management Services console, enable decommissioning.
B. Modify the NTFS permissions of %systemdrive%\inetpub\wwwroot_wmcs\decommission.
C. From the Active Directory Rights Management Services console, create a user exclusion policy.
D. From the Active Directory Rights Management Services console, modify the rights policy templates.
E. Modify the NTFS permissions of %systemdrive%\inetpub\wwwroot_wmcs\licensing.
Answer: A,B
Explanation:
* Decommissioning refers to the entire process of removing the AD RMS
cluster and its associated databases from an organization. This process allows you to save
rights-protected files as ordinary files before you remove AD RMS from your infrastructure
so that you do not lose access to these files.
Decommissioning an AD RMS cluster is achieved by doing the following:
/ Enable the decommissioning service. (A)
/ Modify permissions on the decommissioning pipeline.
/ Configure the AD RMS-enabled application to use the decommissioning pipeline.
* To modify the permissions on the decommissioning pipeline
1.Log on to ADRMS-SRV as cpandl\administrator.
2.Click Start, type %systemdrive%\inetpub\wwwroot_wmcs in the Start Search box, and then press ENTER.
3.Right-click the decommission folder, and then click Properties.
4.Click the Security tab, click Edit, and then click Add. (D)
Etc.

NEW QUESTION: 3
You administer an Azure Web Site named contosoweb that is used
to sell various products. Contosoweb experiences heavy traffic
during weekends.
You need to analyze the response time of the product catalog
page during peak times, from different locations.
What should you do?
A. Turn on Failed Request Tracing.
B. Configure endpoint monitoring.
C. Add the Requests metric.
D. Turn on Detailed Error Messages.
Answer: B
Explanation:
Endpoint monitoring configures web tests from geo-distributed
locations that test response time and uptime of web URLs. The
test performs an HTTP get operation on the web URL to determine
the response time and uptime from each location. Each
configured location runs a test every five minutes. After you
configure endpoint monitoring, you can drill down into the
individual endpoints to view details response time and uptime
status over the monitoring interval from each of the test
location

NEW QUESTION: 4
Who among the following can directly approve changes
recommended in the project?
A. Product Owner
B. Scrum Guidance Body
C. Senior Management
:
The Scrum Guidance Body usually defines a process for approving
and managing changes throughout the organization. In the
absence of a formal process, it is recommended that small
changes that do not have a significant impact on the project be
directly approved by the Product Owner. The tolerance for such
small changes could be defined at an organizational level or by
the sponsor for a particular project. In most projects,
90% of Change Requests could be classified as small changes
that should be approved by the Product Owner. So, the Product
Owner plays a very important role in managing changes in a
Scrum Project.
D. Scrum Master
Answer: B
