NEW QUESTION: 1

A company uses a third party application and an approval process via email. At the end of the month, the IT department enters the data into Microsoft Excel to create pivot charts. The Excel pivot charts must use the same data source as Dynamics 365 Field Service to generate charts and reports.

You need to recommend a solution.

What should you recommend? To answer, select the appropriate configuration in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: Dynamics 365 Workflow notifications

You can configure the system to send email messages to users when workflow-related events occur.

Note:

Go to Navigation pane > Modules > System administration > Users > Users.

In the list, find and select the desired record.
On the Action pane, click User options.
Click the Workflow tab. Make sure that the Notifications section is expanded. In the Notifications section, you can specify how you want the user to be notified about workflow-related events.

Box 2: Dynamics 365 Field Service

Supply Chain Management enables synchronization of business processes between Dynamics 365 Supply Chain Management and Dynamics 365 Field Service. The integration scenarios are configured by using extensible Data integrator templates and Common Data Service to enable the synchronization of business processes. Standard templates can be used to create custom integration projects, where additional standard and custom fields and entities can be mapped to adjust the integration and meet specific business needs.

NEW QUESTION: 2

The CUSTOM tier for Cloud Machine Learning Engine allows you to specify the number of which types of cluster nodes?

- A. Masters, workers, and parameter servers
- B. Workers and parameter servers
- C. Workers
- D. Parameter servers

Answer: B

Explanation:

The CUSTOM tier is not a set tier, but rather enables you to use your own cluster specification. When you use this tier, set values to configure your processing cluster according to these guidelines:

You must set `TrainingInput.masterType` to specify the type of machine to use for your master node. You may set `TrainingInput.workerCount` to specify the number of workers to use. You may set `TrainingInput.parameterServerCount` to specify the number of parameter servers to use. You can specify the type of machine for the master node, but you can't specify more than one master node.

NEW QUESTION: 3

Which interface configuration will accept specific VLAN IDs?

- A. Tab Mode
- B. Subinterface

- C. Trunk Interface
 - D. Access Interface
- Answer: D**
