**NEW QUESTION: 3**

Exhibit:

BGP is flapping after the Copp policy is applied. What are the two solutions to fix the issue?

(Choose two)

- A. Configure a three-color policer instead of two-color policer under class COPP-CRITICAL-7600
- B. Configure BGP in the COPP-CRITICAL-7600 ACL
- C. Configure a higher value for CIR under the class COPP-CRITICAL-7600
- D. Configure IP CEF to CoPP policy and BGP to work
- E. Configure a higher value for CIR under the default class to allow more packets during peak traffic

**Answer: B,E**

Explanation:

Explanation

The policy-map COPP-7600 only rate-limit HTTP & HTTPS traffic (based on the ACL conditions) so any BGP packets will be processed in the class "class-default", which drops exceeded BGP packets. Therefore we have two ways to solve this problem:  
+ Add BGP to the ACL with the statement "permit tcp any any eq bgp"  
+ Configure higher value for CIR in default class as 2Mbps is too low for web traffic (http & https)
