NEW QUESTION: 4 Which two statements about port ACLs are true? (Choose two.)
A. When it is applied to trunk ports, the port ACL filters only native VLAN traffic.
B. When it is applied to a port with voice VLAN, the port ACL filters both voice and data VLAN traffic.
C. Port ACLs support both outbound and inbound traffic filtering.
D. Port ACLs are supported on physical interfaces and are configured on a Layer 2 interface on a switch.
Answer: B, D
Explanation: PACLS filter incoming traffic on Layer 2 interfaces, using Layer 3 information, Layer 4 header information, or non-IP Layer 2 information. The port ACL (PACL) feature provides the ability to perform access control on specific Layer 2 ports. A Layer 2 port is a physical LAN or trunk port that belongs to a VLAN. Port ACLs perform access control on all traffic entering the specified Layer 2 port, including voice and data VLANs that may be configured on the port. Port ACLs are applied only on the ingress traffic.
