Amazon Fargate is a serverless compute engine for containers in the AWS Cloud. It is a managed service that allows you to run Docker containers on Amazon EC2 instances without the need to manage the underlying infrastructure. Fargate is designed to be used with Amazon ECS, but it can also be used with other container engines like Kubernetes. Fargate is a fully managed service, which means that you do not need to manage any of the underlying infrastructure. You can simply define your container tasks and let Fargate handle the rest. Fargate is a great choice for running containerized applications in the AWS Cloud. It is a simple and easy-to-use service that allows you to focus on your application and not on the underlying infrastructure.
