While Windows PowerShell already has the LogPipelineExecutionDetails Group Policy setting to log the invocation of cmdlets, PowerShell's scripting language has plenty of features that you might want to log and/or audit. The new Detailed Script Tracing feature lets you enable detailed tracking and analysis of Windows PowerShell scripting use on a system. After you enable detailed script tracing, Windows PowerShell logs all script blocks to the ETW (event tracing for windows) event log - Microsoft-WindowsPowerShell/Operational. If a script block creates another script block (for example, a script that calls the Invoke-Expression cmdlet on a string), that resulting script block is logged as well. Logging of these events can be enabled through the Turn on PowerShell Script Block Logging Group Policy setting (in Administrative Templates -> Windows Components -> Windows PowerShell).
