As for the points you may elapse or being frequently tested in the real exam, we give referent information, then involved them into our CRT-211 actual exam.

**NEW QUESTION: 1**How does scalability work with cloud computing?  
**A.** Servers and storage can be released quickly.**B.** All of the above is correct.**C.** Servers and storage can be added quickly.**D.** Users can be added and removed quickly.**Answer: B**

**NEW QUESTION: 2****A.** Option **AB.** Option **CC.** Option **BD.** Option **D**  
**Answer: A****Explanation:**The Store password using reversible encryption policy setting provides support for Applications that use protocols that require the user's password for authentication. Storing encrypted passwords in a way that irreversible means that the encrypted passwords can be decrypted. A knowledgeable attacker who is able to break this

encryption can then log on to network resources by using the compromised account. For this reason, never enable Store password using reversible encryption for all users in the domain unless Application requirements outweigh the need to protect password information. If you use the Challenge Handshake Authentication Protocol (CHAP) through remote access or Internet Authentication Services (IAS), you must enable this policy setting. CHAP is an authentication protocol that is used by remote access and network connections. Digest Authentication in Internet Information Services (IIS) also requires that you enable this policy setting. If your organization uses CHAP through remote access or IAS, or Digest Authentication in IIS, you must configure this policy setting to Enabled. This presents a security risk when you Apply the setting through Group Policy on a user-by-user basis because it requires the appropriate user account object to be opened in Active Directory Users and Computers.

**NEW QUESTION: 3** - Mountkirk Games

Mountkirk Games is a leading provider of online gaming services. The company is currently experiencing a significant increase in user activity, which has led to a corresponding increase in server load and latency. The company's current infrastructure is unable to handle the increased demand, and the user experience is suffering. The company is looking for a solution that can scale up or down based on game activity, reduce latency, and improve uptime. The company is also looking for a solution that can dynamically scale up or down based on game activity, connect to a transactional database service to manage user profiles and game state, store game activity in a timeseries database service for future analysis, and ensure that data is not lost due to processing backlogs. The company is looking for a solution that can run hardened and secure.

- \* Improve uptime - downtime is loss of players.\* Increase efficiency of the cloud resources we use.\* Reduce latency to all customers.\*

Technical Requirements

- Requirements for Game Backend Platform
- Dynamically scale up or down based on game activity.\*
- Connect to a transactional database service to manage user profiles and game state.\*
- Store game activity in a timeseries database service for future analysis.\*
- As the system scales, ensure that data is not lost due to processing backlogs.\*
- Run hardened
