Practice exam before the real HFCEP exam on our website.

NEW QUESTION: 1The four components of time series data are secular trend, cyclical variation, seasonality, and random variation. The seasonality in the data can be removed by:**A.** Taking the weighted average over four time periods.**B.** Subtracting a seasonality factor from the data.**C.** Multiplying the data by a seasonality factor.**D.** Ignoring it.**Answer: A**
Explanation:Time series analysis relies on past experience. Changes in the value of a variable may have several possible components including secular trends, cyclical variation, seasonality, and random variation. Seasonal variations are common in many businesses. A variety of methods exist for including seasonal variations in a forecasting model, but most methods use a seasonal index. Alternatively, seasonal variations can be removed from data by using a weighted average of several time periods instead of data from individual periods.

NEW QUESTION: 2Your customer has a new FAS2650 HA cluster with ONTAP 9.1 installed. The cluster is connected to two CN1610 switches. Which two statements describe this installation? (Choose two.)**A.** This is a multiple-node installation.**B.** The cluster interconnect is in a switched configuration.**C.** This is a single-node installation.**D.** The cluster interconnect is in a switchless configuration.**Answer: B,C**
